

### Project Description:

This project is a modern, responsive single landing page design. This fitness Brand named "Body Shape"

### Technologies I Used :

The project was built using a combination of modern front-end technologies. My used technologies html5, tailwind css, google fonts, Font Awesome etc.

### Challenges I Faced While Building It

**Complex Logo Alignment:** A primary challenge was the precise alignment of the logo itself. This involved carefully positioning the "BodyShape" text and ensuring its flanking icon images were perfectly centered vertically. Achieving this balanced look required a detailed approach to using Flexbox alignment utilities to ensure the components scaled correctly together.

**Responsive Slogan Placement:** Another key difficulty was positioning the "Unleash your inner athlete" slogan. The challenge was to maintain a consistent margin below the logo across all screen sizes and ensure the text would wrap gracefully on narrower mobile screens without disrupting the overall centered layout.
